

Retail Sales Analytics using Excel

Data-Driven Insights for Retail Performance

Ghasadiya Maulik

14-MAR-2026

Project Objectives

Dataset Analysis

Comprehensive analysis of retail transaction data using Microsoft Excel

Product Performance

Identification of high-performing products and revenue drivers

Customer Behavior

Understanding purchasing patterns and customer engagement

Store Evaluation

Performance assessment across multiple retail locations

RFM Segmentation

Application of Recency, Frequency, Monetary analysis framework

Dataset Overview

Key Metrics

- Total Revenue: ₹20.85 Million
- Total Products Sold: 429,558 units
- Multiple store locations
- Diverse product categories

Data Structure

Customer-level transaction records with fields including Customer ID, Transaction ID, Product Name, Category, Amount, Month, and Loyalty Flag

Historical Sales Analysis

Overall sales performance shows consistent revenue generation with seasonal variations. Average basket size remains stable, indicating predictable customer purchasing patterns.

- ₹20.85M total revenue generated from retail sales
- 429K units sold across 67K transactions
- Average basket size: 6 products per transaction
- Average transaction value: ₹311
- Average product price: ₹48
- Retail network includes 20 stores across 3 store categories
- Product portfolio consists of 100 products from 15 brands

Revenue Trends

Monthly revenue patterns reveal seasonal peaks and troughs in sales performance

Transaction Volume

Total number of transactions demonstrates customer engagement levels across periods

Basket Analysis

Average basket size indicates typical purchase value per transaction

Product Performance Analysis

Sales analysis reveals significant revenue concentration among a limited number of products, highlighting key product categories that drive retail performance.

- Product sales are concentrated among a few high-performing products.
- Products **Prod71, Prod82, and Prod5** generate the highest revenue.
- The **top 10 products contribute a large share of total sales.**

Revenue Concentration

A small subset of products generates the majority of total revenue

Category Performance

Specific product categories dominate sales across all store locations

Inventory Insights

High-performing SKUs should receive priority in inventory management

Customer & Loyalty Analysis

Top Customer Insights

A small number of high-value customers contribute disproportionately to total revenue, demonstrating typical Pareto distribution in retail.

Loyalty Customer Impact

Loyal customers demonstrate higher purchase frequency and average transaction values compared to non-loyal customers.

RFM Customer Segmentation

Application of Recency, Frequency, and Monetary analysis framework identifies distinct customer segments for targeted marketing strategies.

Champions

Recent purchases, frequent buying, high spending. Ideal candidates for referral programs and premium offers.

Loyal Customers

Regular purchases with consistent spending patterns. Suitable for loyalty rewards and retention campaigns.

Potential Loyalists

High monetary value with moderate frequency. Opportunity for increased engagement through targeted promotions.

At Risk

Previously high-value customers with declining purchase frequency. Requires immediate reactivation strategies.

Store Analysis

- The retail network consists of **20 stores across 3 different store categories.**
- Store performance varies significantly based on **store type, customer traffic, and product demand.**
- Some stores generate **higher revenue due to higher transaction volume and larger basket sizes.**
- Other stores show **lower sales performance, indicating opportunities for marketing or product assortment optimization.**
- Store-level analysis helps identify **high-performing stores and underperforming locations.**
- This insight supports **better inventory planning, store-level promotions, and operational decision-making.**

Basket Analysis

Purchase Behavior Patterns

Product category analysis reveals common purchasing combinations and basket composition trends.

Certain product categories frequently appear together in customer baskets, suggesting opportunities for cross-selling and bundled promotions.

Key Business Insights

Product Concentration

A small number of top products generate a large share of total revenue, highlighting the need for strategic inventory planning.

Customer Pareto

Top 20% of customers contribute nearly 60% of total revenue.

Loyalty Impact

Loyal customers demonstrate 3x higher purchase frequency and 1.8x larger basket sizes

Category Dominance

Specific product categories consistently outperform others in sales volume

Business Recommendations

01

Focus Product Promotions

Concentrate marketing spend on high-performing products that drive 60%+ of revenue

02

Strengthen Loyalty Programs

Enhance rewards structure to increase retention and purchase frequency among loyal customers

03

Target High-Value Segments

Develop personalized offers for Champions and Potential Loyalists using RFM segmentation

04

Optimize Assortment

Adjust inventory levels based on demand patterns and category performance insights

05

Reactivation Campaigns

Launch targeted campaigns for At Risk customers with special incentives to prevent churn
